

AERONET

net for wrapping bales

WWW.AERO-NET.EU

The net is made of high quality HDPE polymers, using the latest achievements of Karl Mayer enterprise. As a result this is a modern product that faces the expectations of every customer.

AERO NET allows making a bale of an ideal shape, which minimalizes gas exchange and makes it easier to wrap with film. This influences positively the final quality of the silage.

High strength of AERO NET allows an ideal shape of bales of grass, alfalfa, maize, sugar beet silage and even the non agricultural waste or turf.

To make the work easier, each roll has a clear marking 50 m before the end.

	Width	Length
Standard	123cm	3000-3600m
Custom	70-150cm	1000-5000m

Flexibility and durability of the net allows tight wrapping of the material prepared for storage, at the same time prevents wasting it. This also facilitates transport and later storage.

Thanks to its versatile use AERO NET allows effective work in any weather conditions and in any latitude.

The length of AERO NET (3600 m) provides the work comfort because it reduces the loss of time for frequent changing the roles.

The applied UV filters protect the product for up to 12 months.

The net allows wrapping bales of every material. Thanks to individually adjusted size, can be used on all round balers available on the market.

AERO NET is made of fully recyclable materials. Increased length of roll reduces the amount of used cores and plastic bags which is more nature friendly.

Facing the needs of the market, we can fit the size of the net to individual demands of our customer.
